

## Addendum for Standard FastBreak Beta Version 6.8

### Release Notes for V6.8

**Note: We decided to call this Beta Version 6.8 to keep version numbers consistent with FastBreak Pro. There is no Beta Version 6.7 for either Standard FastBreak or FastBreak Pro.**

### Bug Fix

On the Buy Filter Tab the **Combine System With** option doesn't automatically load a value in the Weight% text box, i.e.:

The screenshot shows a dialog box titled "Combine System With". It contains two columns of input fields. The first column is labeled "System Name" and the second column is labeled "Weight%". There are two rows of input fields, each with a small square checkbox to its left. The input fields are currently empty.

If the user tries to save a DFT file without entering a value you can get a “Run-time error 13: Type mismatch” error.

We have now put a default value of 0 in the Weight% when FastBreak is launched to prevent this problem.
